

AFRAID OF SYNTHETIC HRT?

Hardware Street Pharmacy has taken the “mortar and pestle” to new dimensions never before seen in community pharmacy in Australia.

On October 14, 2002, this compounding pharmacy was relocated to the new Docklands precinct, which could be the next “Darling Harbour” of Australia.

Now called Compoundia (the Australian Compounding Pharmacy), it was officially opened by the previous proprietor of Hardware Street Pharmacy, Ms Sue Hill, a pioneer in Bio-Identical Hormone Replacement Therapy (BHRT) in Australia and Dr David Zava, an American biochemist who pioneered the salivary testing of hormones and co-author of various books on BHRT.

The world of pharmacy is making a movement away from a pure dispensing role towards a collaborative practice environment. The compounding pharmacist has specialised skills and knowledge in the preparation of medications in a strength and dosage form designed to meet a patient's specific needs. There is no greater display of pharmaceutical

care than the production of customised medications.

With a team of 12 dedicated staff, Compoundia is poised to answer any concern that you may have about recent controversies about Synthetic Hormone Replacement Therapy or any other compounding query. This state-of-the-art compounding facility is one of the biggest in Australia and has been rated as a “world class” compounding laboratory by its American peers. Furthermore, Compoundia is currently in the running for two prestigious City of Melbourne innovative business awards.

For further information about Compoundia or a safe and natural alternative to Synthetic Hormone Replacement contact Compoundia on 9670 2882.
